

Group 1 Heuristics:

Jacob Stephens:

Issue: Nav bar visuals are small

Severity: 1

Heuristics violated: User control and Freedom, Consistency and Standards

Description: The menu and search icons on the top nav bar are small and don't line up properly on mobile. This occurred on my Iphone 6s, desktop these icons appeared normal and not aligned to the top. This overall makes the nav bar awkward looking. When on mobile

Fix: Move the images to be better aligned. Make the images scale with size better. Padding to top while in mobile.

Issue: Can't Escape Menu while on Mobile

Severity: 2

Heuristics violated: User control and Freedom, Consistency and Standards

Description: The menu on mobile upon click works, but the user can't escape the menu. They can click the options and go to other links.

Fix: Fix onclick features of mobile versus desktop. Or create "close menu button"

Kenny Sanders:

Issue: Create guest account functionality

Severity: 2

Heuristics violated: Flexibility and efficiency of use

Description: Need to make an account to be able to do anything – Might be nice to be able to use site without having to go through account creation.

Fix: create a guest account

Issue: Blue text on dark gray

Severity: 1

Heuristics violated: Aesthetic and minimalist design

Description: Blue text on dark gray on homepage is hard to read

Fix: make blue text stand out more (darker background, lighter text? Or vice versa?)

Aliyu Zakari:

Issue: Top Area UI

Severity: 1

Heuristics violated: Consistency and standards

Description: The Menu and Search icons/buttons are too close to the end of the top of the page.

Fix: Bring them down by some pixels or have them placed horizontal middle.

Issue: "Back to search result" button

Severity: 1

Heuristics violated: Recognition rather than recall

Description: The text is easy to miss especially with the kind of background.

Fix: Make it into a button or make increase the weight/boldness of the text.
